

## Funktionsbeschreibung

## How it works

Das einfache Planetengetriebe setzt sich aus den koaxial angeordneten Bauteilen, Sonnenritzel, Planetenträger und Hohlrad, sowie den auf konstanten Achsabstand im Planetenträger drehbar angeordneten Planetenrädern zusammen. Der Eintrieb erfolgt über das Sonnenritzel. Über die Planetenräder wird die Drehbewegung auf den Planetenträger (Abtriebswelle) übertragen. Durch das Abwälzen der Planetenräder im Hohlrad erfolgt eine entsprechende Übersetzung.

The simple planetary gearbox comprises of the coaxial sun gear, planet carrier and outer gear sub-assemblies, and is combined with the planet gears rotating at constant centres about the planet carrier. The input is from the sun gear and the drive motion to the planet carrier is via the planet gears. The rolling contact of the planet gears with the outer gear provides the appropriate ratio.

- 1 = Sonnenrad
- 2 = Planetenrad
- 3 = Hohlrad (Außenring)
- 4 = Planetenträger (Abtriebswelle)

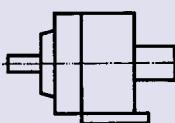

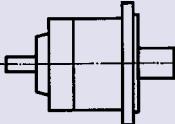

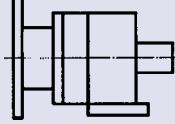

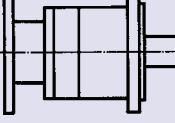

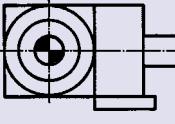

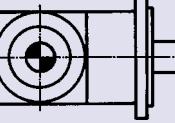

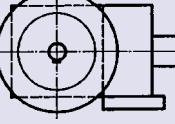

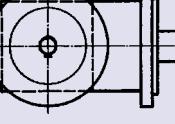

- 1 = Sun gear (input shaft)
- 2 = Planet gear
- 3 = Outer gear
- 4 = Planet carrier (output shaft)

Mehrstufige Getriebe erhält man durch Hintereinanderschaltung von Einzelstufen. Innerhalb der Getriebekombination sind die einzelnen Stufen größtmäßig den jeweiligen Drehmomenten angepaßt. Durch Anbau eines Vogel-Kegelradgetriebes ist auch eine rechtwinklige Getriebekombination möglich.

Multi-stage gearboxes are available by connecting the individual stages in sequence. Within the gear unit combination the individual stages are sized to their torque requirement. Right angle drive combinations are also available with integral Vogel spiral bevel gear units.

## Einsatzbedingungen

### Auswahl der Getriebegrösse

## How to use it

### Selecting the right size

#### Einsatzbedingungen

Bei der Berechnung der max. geforderten Einsatzleistung P der anzutreibenden Maschine müssen folgende Einsatzbedingungen beachtet werden:

$c_1$  = Stossfaktor in Abhängigkeit von der Anzahl der Anläufe pro Stunde und der Betriebsdauer

$c_2$  = Umgebungstemperatur

Die geforderte Eingangsleistung P errechnet sich wie folgt:

$$P = P_1 \times c_1 \times c_2 [\text{KW}]$$

The diagram shows a rectangular frame with three horizontal lines. The top line is labeled "Umgebungstemp. (Tabelle 2)". The middle line is labeled "Stossfaktor (Tabelle 1)". The bottom line is labeled "Nennleistung".

Umgebungstemp.  
(Tabelle 2)

Stossfaktor  
(Tabelle 1)

Nennleistung

errechnete  
Eingangsleistung

#### How to use it

When calculating the maximum required input power P of the machine to be driven, the following application conditions have to be observed:

$c_1$  = Shock factor - this depends on the "starts per hour" and on the "duration of operation"

$c_2$  = Ambient temperature the required input power P can then be calculated as follows:

$$P = P_1 \times c_1 \times c_2 [\text{KW}]$$

The diagram shows a rectangular frame with three horizontal lines. The top line is labeled "Ambient temperatur factor (Table 2)". The middle line is labeled "Shock factor (Table 1)". The bottom line is labeled "Nominal power".

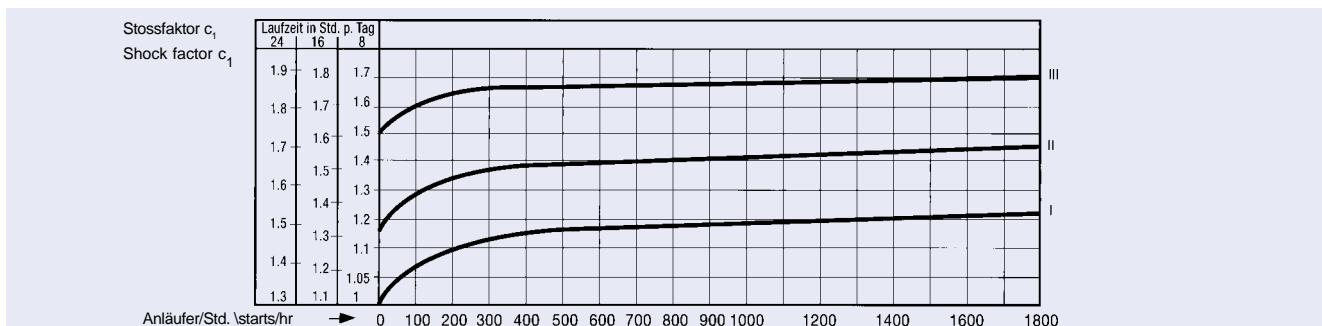

Ambient temperatur  
factor (Table 2)

Shock factor  
(Table 1)

Nominal  
power

Input power  
calculated

Tabelle 1 / Table 1

#### Betriebsart der Arbeitsmaschine

**I gleichförmig** ( $Md_2 + 10\%$ ) keine zu beschleunigenden Massen.

**II mittlere Stöße** kurzzeitige Überlastung ( $Md_2 + 25\%$ ) grösser zu beschleunigende Massen.

**III starke Stöße** kurzzeitige Überlastung ( $Md_2 + 100\%$ ) sehr grosse zu beschleunigende Massen.

#### Operating mode of the machine

**I** uniformly (torque change +10%) no masses to be accelerated.

**II** medium shocks short term overload (torque change +25%) larger masses to be accelerated.

**III** heavy shocks short term overload (torque change +100%) very large masses to be accelerated.

Tabelle 2 / Table 2

| Temperatur<br>Temperature | Umgebungstemperatur $c_2$<br>Ambient temperature $c_2$ |
|---------------------------|--|
| 10° C                     | 1,0  |
| 20° C                     | 1,0  |
| 30° C                     | 1,1  |
| 40° C                     | 1,2  |
| 50° C                     | 1,4  |

#### Auswahl der Getriebegrösse

Aus der errechneten Eingangsleistung P [KW] der anzutreibenden Maschine errechnet sich das Abtriebsmoment  $Md_2$  des **Vogel Getriebes**  $n_2$  = Abtriebsdrehzahl des Getriebes [min<sup>-1</sup>].

$$Md_2 = \frac{9550 \times P \times \eta(0,95)}{n_2} [\text{Nm}]$$

Mit  $Md_2$  und  $i$  kann in der folgenden Tabelle die Getriebegrösse bestimmt werden.

#### Selecting the right size

From the calculated input power P [KW] of the machine to be driven, the output torque  $T_2$  of the **Vogel gearbox** can be found  $n_2$  = output speed of the gearbox [rpm]

$$T_2 = \frac{9550 \times P \times \eta(0,95)}{n_2} [\text{Nm}]$$

With  $T_2$  and  $i$  in the following table the size can be found.

## Wartung - Schmierung

## Maintenance - Lubricant

### Inbetriebnahme

Alle Getriebe werden mit Ölfüllung geliefert. Bei Ölfüllung wird der Entlüftungsfilter separat mitgeliefert und muss vom Kunden montiert werden.

### Ölwechsel

Erster Ölwechsel nach 500 Betriebsstunden; weitere Ölwechsel nach jeweils 3000 Betriebsstunden.

### Setting up the drive

All gearboxes are oil filled. With oil filled gearboxes the breather screw with filter is supplied loose and must be fitted upon installation.

### Oil change

First oil change after 500 operating hours, thereafter every 3000 operating hours.

Die Gewichts- und Mengenangaben sind ca.-Werte. Für die Ölmenge ist der Ölstand im Ölsaugglas massgebend.

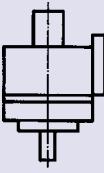

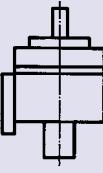

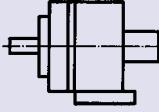

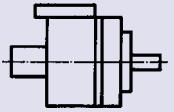

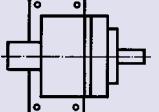

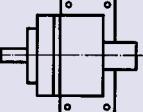

The weight and quantity data are approx. values. For the correct oil quantity, the oil sight glass should be used.

## Einbaulagen

## Mounting positions

**Achtung!**

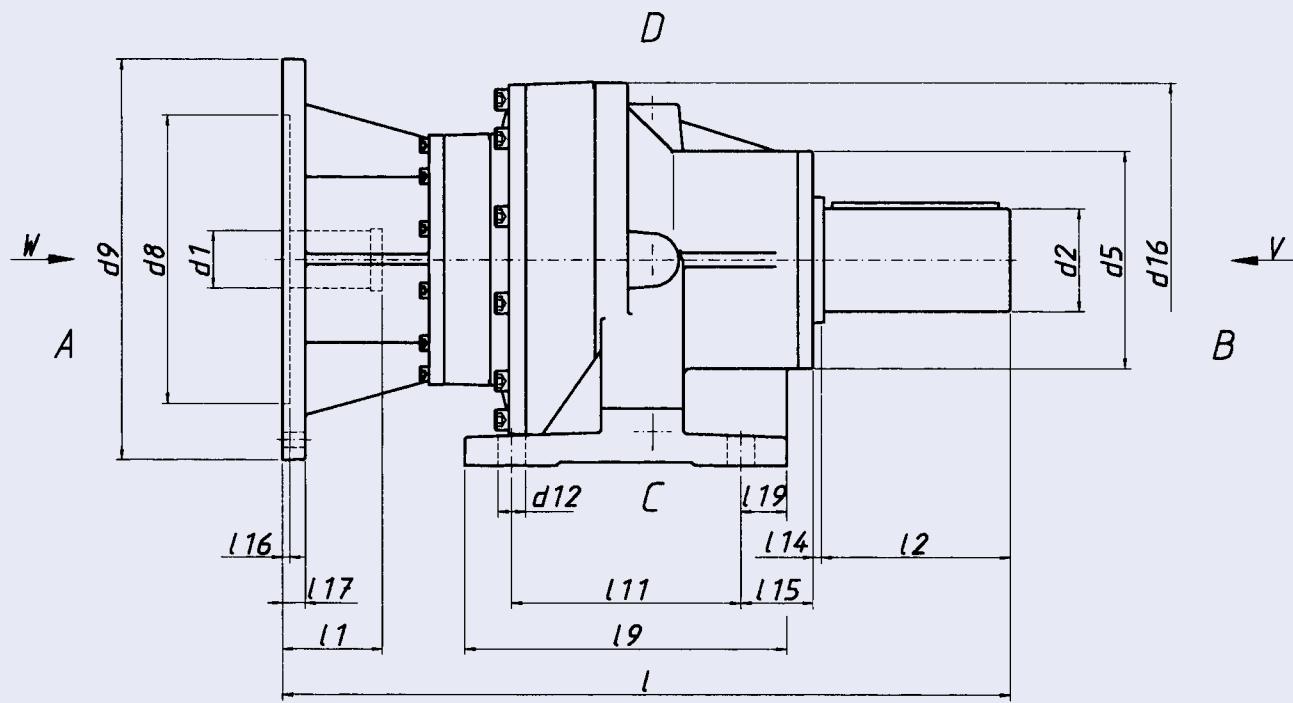

**Please note!**

Nur Motoren nach DIN 42 955 Toleranz R anbauen.  
Antriebsseitiges Schrumpflement gehört zum Lieferumfang.

Only fit motors to DIN 42 955, tolerance R.  
Input clamping element is supplied with each gearbox.

**Mögliche Motorflansche siehe Seite 66**

**Available motorflanges page 66**

**Achtung!**

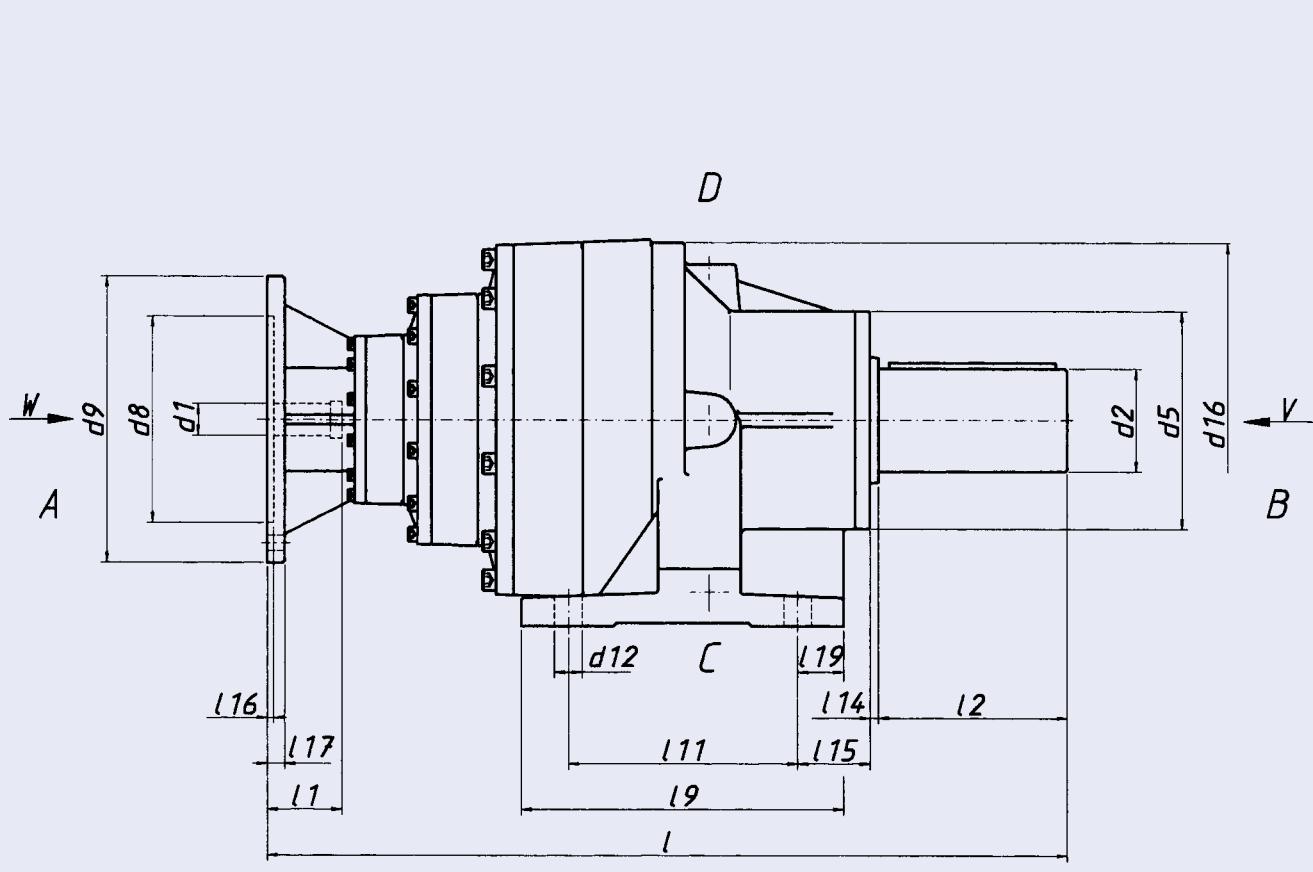

**Please note!**

Nur Motoren nach DIN 42 955 Toleranz R anbauen.  
Antriebsseitiges Schrumpflement gehört zum Lieferumfang.

Only fit motors to DIN 42 955, tolerance R.  
Input clamping element is supplied with each gearbox.

**Abmessungen Typ MPF**  
2-stufig

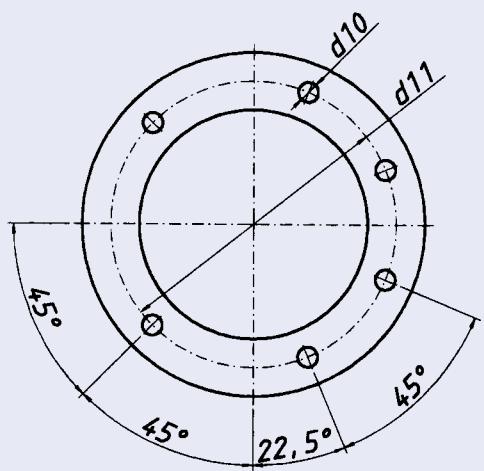

**Dimensions Type MPF**  
2-stage

Achtung!

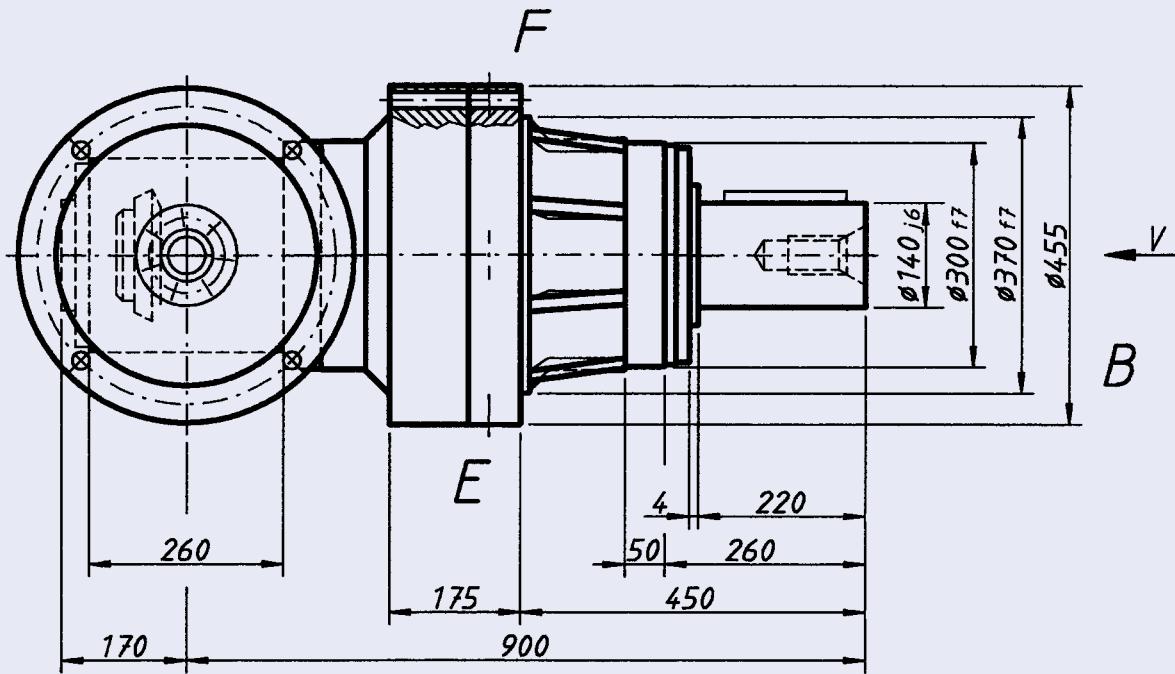

Please note!

Nur Motoren nach DIN 42 955 Toleranz R anbauen.  
Antriebsseitiges Schrumpflement gehört zum Lieferumfang.

Only fit motors to DIN 42 955, tolerance R.  
Input clamping element is supplied with each gearbox.

**Schrumpfscheibenanbau  
bei Hohlwellen**

**Lochking assembly  
for hollow output shaft**

**Für Kragbelastung nicht geeignet**

Bei Radiallast ist ein Gegenlager oder Lagerung der Welle notwendig.

**Not suitable for radial loads**

When radial loads are present additional support bearings for the machine driven shaft are necessary.

**Achtung:**

**Das Anzugsmoment der Spannschrauben der Schrumpfscheibe bitte den Angaben auf der Schrumpfscheibe entnehmen.**

**Anmerkung:**

Bei abtriebsseitiger Hohlwellen-Ausführung kommt bei der Typenbezeichnung ein " H " hinzu.

Beispiel: Typ " P " mit Hohlwelle = Typ " PH "

**Attention:**

**Tighten the screws of the shaft locking bush to the correct torque which is shown on the locking bush in Nm.**

**Notes:**

The type description for gearbox with hollow output shaft is suffix " H "

Type " P " with hollow output shaft = Type " PH "
